## Goals & Targets for Kodak Alaris Imaging Equipment (Shanghai) Co., Ltd.

Kodak Alaris scanners are manufactured at our imaging equipment factory in Shanghai, China. The site operations include equipment assembly, quality assurance and testing. The site's Greenhouse Gas (GHG) emissions are associated exclusively with the consumption of electricity (scope 2 emissions). The site does not have any chemical-intensive or water-intensive operations, so the greatest opportunities to reduce potential environmental impacts are typically focused on reducing electricity consumption and minimizing solid waste. Except for toxic material emissions (which are consistently zero), electricity use, water use and waste are influenced by variability in production volumes and product mix. Annual goals are established for environmental aspects as part of our Environmental Management System, which is third-party certified to ISO 14001:2015.
